Court Case Event – Request/Reply

- Provides a service for an agency to request case information from the AOPC
 - Request Criteria
 - Docket Number Search
 - Offense Tracking Number Search
 - Originating Document Number Search
 - Incident
 - Citation
 - Complaint

Message Format

Extensible Markup Language (XML) is a markup language that defines a set of rules for encoding documents in a format which is both human-readable and machine-readable. It is defined by the W3C's XML 1.0 Specification and by several other related specifications, all of which are free open standards.

- XML stands for **eXtensible Markup Language**
- Designed to transport and store data
- Content is created and marked up with delimiting tags, making each word, phrase, or chunk into identifiable, sortable information.
- The files consist of elements (tags) and content, and the elements help the documents to be understood when processed electronically or even read from printouts
